- Weight 3.4kg

Safety Devices International Ltd, a name synonymous with safety and quality for over 40 years, is acknowledged as one of the leading manufacturers of automotive roll cages. The company also offer complimentary accessories, such as harnesses, which conform to both FIA and Safety Devices' highest safety standards.

As of 1st January 2006, all harnesses used in MSA events must be FIA homologated and in date. This mandatory FIA homologation has brought the UK into line with the rest of Europe. Harnesses are clearly identified by an FIA homologation which is sewn into the webbing near the quick release buckle. All parts of the harness must have a valid FIA homologation label and be identified as being part of the same set. The FIA homologation label states "NOT VALID AFTER (Date)". Once this date has expired the harness is no longer FIA homologated and will be refused if presented for scrutineering.

As seen on TV

Safety Devices' harnesses are fitted in BBC TV's 'Top Gear' F1 drivers' reasonably priced car. Check out Lewis Hamilton in Top Gear, Season 10, Episode 8!

Manufactured in the UK by
TRS Motorsport Equipment
